6. CAPITAL IMPROVEMENT (TANK CAPACITY UNIT) CHARGE

All lands not previously served with water service within or annexing to the District or presently served and requesting a larger metered service and/or require a greater fire protection capability shall be subject to a Capital Improvement (Tank Capacity Unit) Charge as defined in the Tank Capacity Units Chart within this subrule, in addition to the Capital Improvement (acreage) Charge defined elsewhere in this Rule. The only ones exempt from this charge are lands which are included in formal agreements with the District for construction of water storage, conveyance, or well facilities and their appurtenances. The Capital Improvement (Tank Capacity Unit) Charge for upgrading an existing metered service from the smaller to the larger size will be the difference in the Tank Capacity Units represented by the existing meter and the new meter multiplied by the calculated dollar amount of the charge. The Capital Improvement (Tank Capacity Unit) Charge for a new service will be the Billing Units for the respective size of the metered service multiplied by the fire flow demand units (see table below) times the calculated dollar amount of the Capital Improvement (Tank Capacity Unit) Charge. This charge shall remain in effect until changed by the Board of Directors of the District. Applicable credit may be given for this charge as determined by the District Engineer.

The initial calculated dollar amount per Tank Capacity Unit for those developments not entering into agreements with the District shall be..... \$1,598.57

The dollar amount per tank capacity unit for negotiated agreements between developers and the District shall be set by the District Engineer and approved by the Board of Directors.

Notwithstanding the above provisions or any other District Rules, the District may allow a developer to sell its excess Capital Improvement (Tank Capacity) Units to other developers or individuals whose property has not been previously served by the District, or those developers or individuals upgrading an existing service.

All lands not previously served with water service within or annexing to the District or presently served and requesting a larger metered service and/or requiring a greater fire protection capability shall be subject to a Capital Improvement (Tank Capacity Unit) Charge as defined in the Tank Capacity Units Charge within this part of the subrule, in addition to the Capital Improvement (Acreage) Charge defined elsewhere in the Rule. The Capital Improvement (Tank Capacity Unit) Charge for a new water service will be the Billing Units for the respective size of the metered service multiplied by the fire flow demand units, referred herein as "tank capacity units" (see table), times the calculated dollar amount of the Capital Improvement (Tank Capacity Unit) Charge as defined below in this subrule. The Capital Improvement (Tank Capacity Unit) Charge for upgrading an existing metered service from the smaller to the larger size will be the difference in the dollar amount represented the tank capacity units of the existing meter multiplied by the charge in effect at the time of the existing meter was installed and the tank capacity units of the new meter multiplied by the amount of the charge as defined below in this subrule. Applicable credit may be given for this charge as defined in Rule 1-A-50.

The calculated dollar amount per Tank Capacity Unit for those developments not entering into agreements with the District shall be..... \$1,598.57

The dollar amount per tank capacity unit for negotiated agreements between developers and the District shall be set by the District Engineer and approved by the Board of Directors.

Notwithstanding the above provisions or any other District Rules, the District may allow a developer to sell its excess Capital Improvement (Tank Capacity) Units to other developers or individuals whose property has not been previously served by the District, or those developers or individuals upgrading an existing service.

After evaluation of the costs of the District, the Engineer will review the above charges on January 1 of every year and make a recommendation to the Board to adjust these charges accordingly.

* For meters over 2 inches, the number of Billing Units will be determined by adding together all domestic and sprinkler fire protection flows to the premises and dividing by 30 (30 being the gallons per minute equivalent to one billing unit).

** Actual number of units to be calculated by multiplying fire flow in gpm by duration in minutes divided by 60,000 gallons.

*** Fire flow not listed shall be equivalent to fire flow storage capacity (Fire Flow x Duration).

EXAMPLES: Typical developments:

1. Single family residence: Public Fire Flow = 1,250 gpm = 2.5 F.F.D.U., 3/4 x 1 domestic water meter = 1 B.U.; 1 B.U. x 2.5 F.F.D.U. = 2.5 Tank Capacity Units.
2. Multi-residential & Office Buildings: Fire Flow 2,000 gpm, five (5) 2-inch domestic water meters [(5 meters) x 5 B.U.] x 4 F.F.D.U. = 100 Tank Capacity Units.
3. Shopping Center, Private System: Private Fire Flow 1,250 gpm, Public Fire Flow 2,500 gpm; 3 - 1 1/2-inch water meters [(3 meters) x 3 B.U.] x 5 F.F.D.U. = 45 Tank Capacity Units.
4. Landscape meter: No Public Fire Flow (Use Lowest Value) = 1 F.F.D.U., 2-inch water meter = 5 B.U.; 5 B.U. x 1 F.F.D.U. = 5 Tank Capacity Units.
5. FMCT meters: Total domestic flow divided by 30 = number of billing units Domestic Flow = 650 gpm / 30 = 22 B.U. Fire Flow = 2,750 gpm = 8.25 F.F.D.U.; 22 B.U. x 8.25 F.F.D.U. = 181.5 Tank Capacity Units
