

How to Set Up a New File in OpenRoads

1. Open "OpenRoads Designer" and create new file using "2d seed". Seed files can be found in these locations:

C: Drive

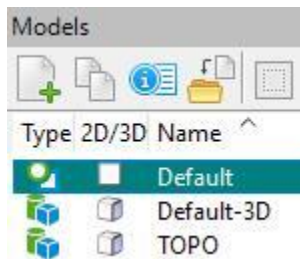

C:\ProgramData\Bentley\LACOPW_CONNECT\Configuration\Organization\Seed\dpw-model-seed-2d.dgn

ProjectWise:

pw:\\pvedmsprod01.dpw.co.la.ca.us:PW_INT2\Documents\Standards\MicroStation\Workspaces\LACOPW_CONNECT\Configuration\Organization\Seed\dpw-model-seed-2d.dgn

2. Import **TOPO** (3d survey) in as a Model
3. Generate Terrain in the **TOPO** model
4. Reference **TOPO** into the **Default** model.
5. Activate Terrain in **Default** for OpenRoads to auto-generate a new **Default-3D**. (do not rename this)
6. Create Horizontal Alignment in **Default** model

Example of the 3 models described:

Here are the references in the **Default** model:
